

Purge Unit MKII

The GEA Professional Purge Unit is easy to use and enable low pressure purging to be carried out safely according to the Institution of Gas Engineers and Managers document UP/1 and 1A for purging pipe work up to 150mm (6").

It can also be used for setting up meter regulators under flow conditions to save a second site visit when appliances are being commissioned.

Quick and simple to set to the correct velocity to minimise gas emissions to atmosphere, no calculations required.

A complete package which is contained in a durable aluminium framed and reinforced case includes 2.5m vent stacks, sample point, flame trap, safety signs and a 5m purge hose with unions.

Also available is a low pressure air assembly with a 5m hose that can be simply connected on to the fan unit to ensure that purges from gas to air are carried out quickly and safely.
